-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### **Formal Matters**

The only claim was numbered "5", but since this is a new application, "5" has been changed to "1".

### **Claim Rejections - 35 U.S.C. § 102**

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Johnson, Jr. et al. (5,230,335). Johnson et al. disclose a therapy component comprising:

a bladder (Figure 2 and formed as compartment 42) for receiving a cooled fluid (heat exchange medium) and being compliant to conform to a body part (Figures 7-9);

a gas (air) pressure bladder (44) overlaying at least a part of the bladder for heat exchange medium to direct pressure against the body part, and defined at least partly by a pair of generally parallel walls (Figure 1);

a plurality of first connections (Figure 2) connecting the walls together interiorly of the gas pressure bladder to inhibit separation of the walls; and

a plurality of second connections interiorly of the bladder for heat exchange medium; wherein the second connections are a dot matrix of connections (57 and col. 6, line 50-col. 7, line 60 and col. 8, line 67-col. 9, line 9).

### **Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Olofsson (6,156,059) discloses a cooling apparatus with a lower bladder for flowing liquid therethrough and an upper bladder or a plurality of bladders filled with air to serve as thermal insulators; and Nicholson (3,561,435) discloses a combined air splint and coolant container wherein the air splint forces the container filled with crushed ice against the body part.
